HoloBuilder VideoMode

HoloBuilder introduces the fastest and most seamless capture method yet.

Combining the highest levels of speed, convenience, and accuracy, HoloBuilder VideoMode allows you to document your site with minimal effort. Built right into the JobWalk app, users can now find the VideoMode button. Tag your starting location once, walk the site, and let VideoMode do the rest.

The Fastest and Most Seamless Way to Capture Your Jobsite

Minimal Set-up and Interaction

Simply tap and go: Tag your location once in the JobWalk app, walk the site and be assured that HoloBuilder's VideoMode is capturing construction progress in 360° along the way. No manual phone interaction required while you are walking, so you can focus more on what matters.

Automatic Syncing to the Floor Plan

HoloBuilder's computer vision algorithms automatically organize your captures on your floor plan. VideoMode captures a frame every few seconds and adds them automatically to the floor plan as 360° photos, creating a dense net of documentation that leaves no gaps.

Increase Documentation Frequency

The great ease of use of VideoMode makes site documentation a breeze and helps you to increase the adoption of HoloBuilder organization-wide. Ensure that captures are done more often as team members in the field can do it faster and easier. Speed up your site documentation time significantly and capture 160k SQFT per hour.

Full Spectrum of Capture Methods

With the addition of VideoMode, HoloBuilder provides the broadest spectrum of capture methods. Choose the right way to capture depending on your jobsite's needs. ClassicMode helps you to clearly structure and organize high quality 360° photos on the floor plan and provides instant accessibility; VideoMode is the fastest and most seamless capture method yet. SpeedMode and ContinuousMode offer a great trade-off between photo structure and capture speed.
